INDEX to VOL. XXX.

ABEL (F. A.) and Captain Noble, note on the existence of potassium hyposulphite in the solid residue of fired gunpowder, 198.

Abel's theorem, with addition by Cayley (Rowe), 515.

Abney (Capt. W. de W.—the Bakerian lecture)—on the photographic method of mapping the least refrangible end of the solar spectrum (with a map of the solar spectrum from 7600 to 10750), 67.

Actinism of the sun's rays and of daylight, measurement of the (Angus Smith), 355.

Agricultural, botanical, and chemical results of experiments on the mixed herbage of permanent meadow, conducted for more than twenty years in succession on the same ground: Part II (Lawes, Gilbert, and Masters), 556.

Aleurone grains, on the chemical composition of (Vines), 387.

Aluminium iodine, revision of the atomic weight of (Mallet), 320.

— reaction, the (Gladstone and Tribe), 545.

— note on the bearing of the fact that this metal occludes hydrogen, on the atomic weight of (Mallet), 574.

Amöeboid cells, on the coalescence of, into plasmodia, and on the so-called coagulation of invertebrate fluids (Geddes), 252.

Analytical expressions, on which the history of a fluid planet of small viscosity, attended by a single satellite (Darwin), 255.

Anemometer, cup, on the constants of of the (Robinson), 572.

Animal mechanics, on some elementary principles in, No. IX. The relation between the maximum work done, the time of lifting, and the weights lifted by the arms (Haughton), 219.

— No. X. Further illustrations of the "Law of Fatigue" (Haughton), 359.

Annual meeting for election of Fellows, 468.

Anthrax, preliminary note on some points in the pathology of, with especial reference to the modification of the properties of the Bacillus anthracis by cultivation (Greenfield), 557.

Armstrong (G. F.), on the diurnal variation in the amount of carbon dioxide in the air, 343.

Artificial formation of the diamond, on the (Hannay), 188, 450.

Attfield (J.), elected 468; admitted 469.

Aurora Borealis, on the height of the (De La Rue and Müller), 332.

Ayrton (W. E.) and J. Perry, a preliminary account of the reduction of observations on strained material, Leyden jars, and voltameters, 411.

Bacterium fritidum, on (Thin), 473.

Bakerian Lecture.—On the photographic method of mapping the least refrangible end of the solar spectrum (with a map of the solar spectrum from 7600 to 10750), by Capt. W. de W. Abney, 67.

Barometer, on the construction of a glycerine (Jordan), 105.

Batrachia, on the structure and development of the skull in the (Parker), 435.

Beresford-Hope (A. J.), elected, 520.

Blanford (H. F.), elected, 468.

Borneo, exploration of the caves of (Everett), 310.

Brooke (C.), obituary notice of, i.

Broun (J. A.), obituary notice of, iii.

— (H. T.) and J. Heron, some observations upon the hydrolytic ferments of the pancreas and small intestine, 393.

Buff's experiments on the diathermancy of air (Tyndall), 10.

Busk (G.), exploration of the caves of Borneo: note on the bones collected, 310.
INDEX.

Candidates for election, list of, 197.
Candidates recommended for election, list of, 373.
Capillary electroscope, on the (Gore), 32.
Carbon dioxide, on the spectra of the compounds of, with hydrogen and nitrogen (Lively and Dewar), 152.
— note on the spectrum of (Lockyer), 335.
— on the diurnal variation in the amount of, in the air (Armstrong), 343.
— further note on the spectrum of (Lockyer), 461.
— spectrum, note on the history of the (Lively and Dewar), 490.
— tetrachloride, spark discharge in, 498.
— with hydrogen and nitrogen, on the spectra of the compounds of, No. II (Lively and Dewar), 494.
Carbonic acid, liquefaction of, in presence of other bodies (Dewar), 537.
Chemical repulsion (Mills), 68.
Chemico-electric relations of metals in solutions of salts of potassium (Gore), 38.
Chinoline series, studies on the (J. Dewar), 164.
Chloride of silver battery, experimental researches on the electric discharge with, supplement to Part III (De La Rue and Müller), 563.
Clifford-Albutt (T.), elected, 468; admitted, 469.
Coagulation, so-called, of invertebrate fluids (Geddes), 252.
Coal-measures, on the organisation of the fossil plants of the (Williamson), 550.
Coalescence of ameboid cells, on the (Geddes), 252.
Colouring matters of human urine, researches into the (MacMunn), 250.
Compounds of carbon, spark discharge in, 502.
Critical point of mixed vapours, on the (Dewar), 537.
Critical state of gases, on the (Ramsay), 323.
Crookes (W.) on a fourth state of matter, in a letter to the Secretary, 469.
Cruonian Lecture.—On some elementary principles in animal mechanics: No. IX. The relation between the maximum work done, the time of lifting, and the weights lifted by the arms (Haughton), 219.
Cup anemometer, on the constants of the (Robinson), 672.
Cyanogen, flame of, 495.
Dallinger (Rev. W. H.), elected, 468; admitted, 469.
Darwin (G. H.) on the secular changes in the elements of the orbit of a satellite revolving about a tidally distorted planet, 1.
— on the analytical expressions which give the history of a fluid planet of small viscosity, attended by a single satellite, 255.
Definite integrals, on certain: No. 6 (Russell), 100.
— No. 7 (Russell), 103.
De La Rue (W.) and H. W. Müller, experimental researches on the electric discharge with the chloride of silver battery, 563.
— on the height of the Aurora Borealis, 332.
De Merittens magneto-electric machine, on some of the effects produced by an induction coil with a (Spottiswoode), 173.
Description of some remains of the gigantic land-lizard (Megalania prisca, Owen) from Australia: Part II (Owen), 304.
Dewar (J.), studies on the electric arc, 85.
— studies on the chinoline series, 164.
— note on electrolytic experiments, 170.
— on the lowering of the freezing-point of water by pressure, 533.
— on the critical point of mixed vapours, 538.
— and G. D. Lively, on the spectra of magnesium and lithium, 93.
— on the spectra of the compounds of carbon with hydrogen and nitrogen, 152.
— note on the history of the carbon spectrum, 490.
— on the spectra of the compounds of carbon with hydrogen and nitrogen: No. II, 494.
— on the spectrum of water, 580.
Diamond, on the artificial formation of the (Hannay), 188, 450.
Diathermancy of air, on Buff's experiments on the (Tyndall), 10.
Discus proligerus, observations upon the mode of formation of the, in the rabbit (Schäfer), 287.
Diurnal variation in the amount of carbon dioxide in the air (Armstrong), 343.
Dixey (A.) and E. A. Schäfer, preliminary note on the ossification of the terminal phalanges of the digits, 550.
Dog, observations upon the mode of formation of the ovarian glands or "egg-tubes" in the (Schäfer), 287.
INDEX.

Dog and fox, on the epipubic in the (Huxley), 162.
Dyer, W. T. T., elected 463; admitted 469.
Dynamo- and magneto-electric machines, on magnetic circuits in (Elphinstone and Vincent), 287.
Dynamo-electric current, on the, and on certain means to improve its steadiness (Siemens), 208.

Echidna hybrida, on the ova of (Owen), 407.
Educts of the brain, on the inorganic bases and salts which are found in combination with (Thudichum), 278.
Effects produced by an induction coil with a De Meritens magneto-electric machine, on some of the (Spottiswoode), 173.

"Egg-tubes," observations upon the mode of formation of, in the dog (Schäfer), 237.
Election of Fellows, annual meeting for, 468.
Election, list of candidates recommended for, 373.
Electric arc, studies on the (Dewar) 85.
— currents, on the induction of, in infinite plates and spherical shells (Niven), 113.
— light, on the influence of, upon vegetation, and on certain physical principles involved (Siemens), 210.
— some further observations on the influence of, upon vegetation (Siemens), 293.
— currents, effects of, on the surface of mutual contact of aqueous solutions (Gore), 322.
— on some thermal effects of (Preece), 408.
Electrolytic experiments, note on (Dewar), 170.
Electro-magnetic gyroscope, on an (de Fonvielle), 305.
Electroscope, on the capillary (Gore), 32.
Elements of the orbit of a satellite revolving about a tidally distorted planet, on the secular changes in the (Darwin), 1.
Ellis (A. J.), notes of observations on musical beats, 520.
Elphinstone (Lord) and C. W. Vincent on magnetic circuits in dynamo- and magneto-electric machines, 287.
English reproduction table (Farr), 110.
Epipubic in the dog and fox, on the (Huxley), 162.
Ettingshausen (Baron), report on phyto-paleontological investigations of the fossil flora of Alum Bay, 228.
Evans (John), introductory remarks to VOL. XXX.

A. H. Everett's report on the exploration of the caves of Borneo, 310.
Everett (A. Hart), report on the exploration of the caves of Borneo, 310.
Ewing (J. A.) on certain effects of stress on soft iron wires, 510.
Excitatory process in the ventricle of the heart of the frog, notice of further experimental researches on the time-relations of the (Sanderson), 373.
Experimental researches on the electric discharge with the chloride of silver battery (De La Rue and Müller), 563.
Exploration of the caves of Borneo, report (Everett), introductory remarks, (Evans), and note on the bones collected (Busk), 310.

Farr (W.), English reproduction table, 110.
Fired gunpowder, note on the existence of potassium hypo sulphite in the solid residue of fired gunpowder (Noble and Abel), 198.
Fluid planet of small viscosity, on the analytical expressions which give the history of a, attended by a single satellite (Darwin), 255.
Fluids, on the state of, at their critical temperatures (Hannay), 478.
Fonvielle (W. de) on an electro-magnetic gyroscope, 305.
Fortieth parallel in North America between the Atlantic Ocean and the Great Salt Lake, Utah, a magnetic survey of (Thorpe), 132.
Fossil flora of Alum Bay, report on phyto-paleontological investigations of the (Ettingshausen), 228.
Fossil plants of the Coal-measures, on the organisation of: Part XI (Williamson), 550.
Fourth state of matter (Crookes), 469.
Fowl, on the structure of the immature ovarian ovum in the common (Schäfer), 237.
Freezing point of water, on the lowering of the, by pressure (Dewar), 533.

Gamgee (Arthur), a note on protagon, 111.
Gases, on the critical state of (Ramsay), 323.
— on the solubility of solids in: II (Hannay), 484.
Gaskell (W. H.) on the tonicity of the heart and arteries, 225.
Geddes (P.) on the coalescence of ameboid cells into plasmodia, and on the so-called coagulation of invertebrate fluids, 252.
Gilbert (J. H.), J. B. Lawes, and M. T. Masters, agricultural, botanical, and
INDEX.

chemical results of experiments on the
mixed herbage of permanent meadow,
conducted for more than twenty years
in succession on the same land:
Part II. The botanical results, 566.
Gladstone (J. H.) and A. Tribe, the
aluminium iodine reaction, 545.
Glycerine barometer, on the construction 
of a (Jordan), 105.
Godwin-Austen (Lieut.-Col. H. H.),
elected, 468; admitted, 469.
Gore (G.), on the capillary electroscope,
32.
— chemico-electric relations of metals
in solutions of salts of potassium, 38.
— effects of electric currents on
the surfaces of mutual contact of aqueous
solutions, 322.
Graves (Right Rev. C., Bishop of
Limerick), elected, 468.
Greenfield (W. S.), preliminary note on
some points in the pathology of
anthrax, with special reference to the
modification of the properties of the
Bacillus anthracis by cultivation, and
to the protective influence of inoculation
with a modified virus, 557.
Gyroscope, on an electro-magnetic (de
Fonvielle), 305.
Hannay (J. B.) on the artificial forma-
tion of the diamond, 188, 450.
— on the state of fluids at their criti-
cal temperatures, 478.
— on the solubility of solids in gases:
II, 484.
— and J. Hogarth on the solubility of
solids in gases, 178.
Haughton (Rev. Samuel) the Croonian
Lecture.—On some elementary prin-
ciples in animal mechanics: No. IX.
The relation between the maximum
work done, the time of lifting, and
the weights lifted by the arms, 219.
— on some elementary principles in
animal mechanics: No. X. Further
illustrations of the “Law of Fatigue,”
359.
Heart and arteries, on the tonicity of the
(Gaskell), 225.
Heer (O.) on the Miocene plants dis-
covered on the Mackenzie River, 560.
Heron (J.) and H. T. Brown, some
observations upon the hydrolytic fer-
ments of the pancreas and small intest-
tine, 393.
Histology of Hydra fusca, on the
(Parker), 61.
Hogarth (J.) and J. B. Hannay on the
solubility of solids in gases, 178.
Huggins (William) on the photographic
spectra of stars, 20.
Huggins (William) on the spectrum of
the flame of hydrogen, 576.
Hughes (D. E.), elected, 468; admitted,
469.
Huxley (T. H.) on the epipubis of the
dog and fox, 162.
Hydra fusca, on the histology of
(Parker), 61.
Hydrogen, note on the spectrum of
(Lockyer), 31.
— on the spectrum of the flame of
(Huggins), 576.
Hydrolitic ferments of the pancreas and
small intestine, some observations on
the (Brown and Heron), 393.

Induction of electric currents in infinite
plates and spherical shells, on the
(Niven), 113.
Induction coil, on some of the effects
produced by an, with a De Meritens
magneto-electric machine (Spottis-
woode), 173.
Influence of electric light upon vegeta-
tion, on the (Siemens), 210.
— some further observations on the
(Siemens), 298.
Inoculation, protective influence of, with
a modified virus (Greenfield), 557.
Integrals, on certain definite, No. 6
(Russell), 100.
— No. 7 (Russell), 103.
Invertebrate fluids, on the so-called
coagulation of (Geddes), 252.
Iron wires, on certain effects of stress on
soft (Ewing), 510.
Jeffery (H. M.), elected, 468; admitted,
469.
Jordan (James B.) on the construction
of a glycerine barometer, 105.

Lankester (E. R.), note on the discovery
of a fresh water medusa of the order
Trachomedusa, 554.
Lawes (J. B.), J. H. Gilbert, and M. T.
Masters, agricultural, botanical, and
chemical results of experiments on the
mixed herbage of permanent meadow,
conducted for more than twenty years
in succession on the same land:
Part II. The botanical results, 556.
Liquid annulus, on the spontaneous seg-
mentation of a (Worthington), 49.
Liveing (G. D.) and J. Dewar, on the
spectra of magnesium and lithium, 93.
— on the spectra of the com-

ounds of carbon with hydrogen and
nitrogen, 152.
— note on the history of the
carbon spectrum, 490.
— on the spectra of the com-
INDEX.

pounds of carbon with hydrogen and nitrogen: No. II, 494.
Liveing (G. D.) and J. Dewar on the spectrum of water, 580.
Lockyer (J. N.), on a new method of spectrum observation, 22.
— note on the spectrum of hydrogen, 31.
— note on the spectrum of carbon, 335.
— further note on the spectrum of carbon, 461.

Mackenzie River, Miocene plants discovered on the (Heer), 560.
Mackmann (C. A.), researches into the colouring matters of human urine, with an account of the separation of urobilin, 250.
Magnetic survey of the fortyeth parallel in North America between the Atlantic Ocean and the Great Salt Lake, Utah (Thorpe), 132.
— circuits in dynamo- and magnetoelectric machines (Elphinstone and Vincent), 287.
Mallet (J. W.), revision of the atomic weight of aluminium, 329.
— note on the bearing on the atomic weight of aluminium of the fact that this metal occludes hydrogen, 574.
Masters (M. T.), J. B. Lawes, and J. H. Gilbert, agricultural, botanical, and chemical results of experiments on the mixed herbage of permanent meadow, conducted for more than twenty years in succession on the same land: Part II. The botanical results, 556.
Matter, on a fourth state of (Crookes), 469.
Maxwell (J. Clerk) on a possible mode of detecting a motion of the solar system through the luminiferous ether. In a letter to Mr. D. P. Todd, of the Nautical Almanac Office, Washington, U.S., 108.
M'Coy (F.), elected, 468.
Meadow, mixed herbage of permanent, experiments on (Lawes, Gilbert, and Masters), 556.
Measurement of the actinism of the sun's rays and of daylight (Smith), 355.
Medusa, fresh-water, note on the discovery of a (Lankester), 554.
— additional note, 556.
Megalania prisca, description of some remains of: Part II (Owen), 304.
Metals in solutions of salts of potassium, chemico-electric relations of (Gore), 38.
Mills (E. J.), on chemical repulsion, 68.

Mixed vapours, on the critical point of (Dewar), 597.
Motion of the solar system through the luminiferous ether, on a possible mode of detecting a (Maxwell), 108.
Moulton (J. Fletcher) elected, 468: admitted, 469.
— and W. Spottiswoode on the sensitive state of vacuum discharges: Part II, 302.
Müller (H. W.) and W. De La Rue, experimental researches on the electric discharge with the chloride of silver battery: Supplement to Part III, 563.
— on the height of the Aurora Borealis, 332.
Musical beats, notes of observations on (Ellis), 520.

New method of spectrum observation, on a (Lockyer), 22.
Nitrogen, on the amount of, excreted in the urine by man at rest (West and Russell), 444.
Niven (C.), elected, 468; admitted, 520.
— on the induction of electric currents in infinite plates and spheric shells, 113.
Noble (Captain) and F. A. Abel, fired gunpowder: Note on the existence of potassium hyposulphite in the solid residue of fired gunpowder, 198.
Northbrook (Lord), elected, 67; admitted, 173.
Note on protagom (Gammee), 111.

Obituary notices of Fellows deceased: — Brooke (Charles), i. Broun (John Allan), iii.
On the spectrum of water (Liveing and Dewar), 580.
Orbit of a satellite revolving about a tidally distorted planet, on the secular changes in the elements of the (Darwin), 1.
Ossification of the terminal phalanges of the digits, preliminary note on (Schäfer and Dixey), 550.
Ova of Echidna hystrix, on the (Owen), 407.
Ovarial glands or "egg-tubes," observations upon the mode of formation of the, in the dog (Schäfer), 237.
Ovarian ovum, on the structure of the immature, in the common fowl and in the rabbit (Schäfer), 237.
Owen (Professor), description of some remains of the gigantic land-lizard (Megalania prisca, Owen) from Australia: Part II, 304.
— on the ova of Echidna hystrix, 407.

23
INDEX.

Pancreas and small intestine, some observations upon the hydrolytic ferment of the (Brown and Heron), 393.
Parker (W. K.) on the structure and development of the skull in the Batrachia, 435.
— (T. Jeffery) on the histology of Hydra fusca, 61.
Periodicity of rainfall, results of an inquiry into the (Whipple), 70.
Perry (J.) and W. E. Ayrton, a preliminary account of the reduction of observations on strained material, Leyden jars, and voltameters, 411.
Photographic spectra of stars, on the (Huggins), 20.
— method of mapping the least refrangible end of the solar spectrum (Abney), 67.
Plants, Miocene, discovered on the Mackenzie River (Hoer), 560.
Plasmodia, on the coalescence of amœboïd cells into (Geddes), 252.
Potassium, on the modifications of the spectrum of, which are effected by the presence of phosphoric acid (Thudichum), 278.
Preece (W. H.) on some thermal effects of electric currents, 408.
プレゼンシス, lists of, 122, 189, 235, 365, 463, 582.
Protagon, a note on (Gamgee), 111.
— on the absence of potassium in, prepared by Dr. Gamgee (Roscoe), 365.
Rabbit, on the structure of the immature ovarian ovum in the (Schäfer), 237.
— observations upon the mode of formation of the Discus proligerus in the (Schäfer), 237.
Rae (J.), elected, 468; admitted, 469.
Ramsay (William) on the critical state of gases, 323.
Report on phytos-paleontological investigations of the fossil flora of Alum Bay (Ettingshausen), 228.
Reproduction table, English (Farr), 110.
Reynolds (J. E.), elected, 468.
— (O.), note on thermal transpiration, in a letter to Professor Stokes, Sec. R.S., 300.
Rheotome, on a new (Sanderson), 383.
Robinson (Rev. T. R.) on the constants of the cup anemometer, 572.
Roscoe (H. E.) on the absence of potassium in protagon prepared by Dr. Gamgee, 365.
Rowe (R. C.), memoir on Abel’s theorem, 515.
Russell (W. H. L.) on certain definite integrals : No. 6, 100.
— No. 7, 103.
Russell (W. J.) and S. West on the relation of the urea to the total nitrogen of the urine in disease, 438.
— on the amount of nitrogen excreted in the urine by man at rest, 444.
Sanderson (J. B.), notice of further experimental researches on the time-relations of the excitatory process in the ventricle of the heart of the frog, 373.
— on a new rheotome, 383.
Schäfer (E. A.) and A. Dixey on the structure of the immature ovarian ovum in the common fowl and in the rabbit. To which is appended some observations upon the mode of formation of the Discus proligerus in the rabbit, and of the ovarian glands or “egg-tubes” in the dog, 237.
— preliminary note on the ossification of the terminal phalanges of the digits, 550.
Secular changes in the elements of the orbit of a satellite revolving about a tidally distorted planet, on the (Darwin), 1.
Sensitive state of vacuum discharges, on the (Spottiswoode and Moulton), 302.
Siemens (C. W.) on the dynamo-electric current, and on certain means to improve its steadiness, 208.
— on the influence of electric light upon vegetation, and on certain physical principles involved, 210.
— some further observations on the influence of electric light upon vegetation, 293.
Skull, on the structure and development of the, in the Batrachia (Parker), 435.
Smith (R. Angus), measurement of the actionism of the sun’s rays and of daylight, 355.
Solar spectrum, photographic method of mapping the least refrangible end of the (Abney), 67.
— system, on a possible mode of detecting a motion of the, through the luminiferous ether (Maxwell), 108.
Solubility of solids in gases, on the (Hannay and Hogarth), 178.
— (Hannay), 484.
Spectra of stars, on the photographic (Huggins), 20.
— of magnesium and lithium (Liveing and Dewar), 93.
— of compounds of carbon with hydrogen and nitrogen (Liveing and Dewar), 152.
— No. II, 494.
Spectrum observation, on a new method of (Lockyer), 22.
— of hydrogen, note on the (Lockyer), 31.
— of potassium, on the modifications of the, which are effected by the presence of phosphoric acid, and on the inorganic bases and salts which are found in combination with educts of the brain (Thudichum), 278.
— of carbon, note on the (Lockyer), 355.
— further note on the (Lockyer), 461.
— note on the history of (Living and Dewar), 490.
— of the flame of hydrogen, on the (Huggins), 576.
— of water (Living and Dewar), 580.
Spontaneous segmentation of a liquid annulus, on the (Worthington), 49.
Spottiswoode (William) on some of the effects produced by an induction coil with a De Mertens magneto-electric machine, 173.
— and J. Fletcher Moulton on the sensitive state of vacuum discharges: Part II, 302.
Stars, on the photographic spectra of (Huggins), 20.
Strained material, Leyden jars, and voltmeters, a preliminary account of the reduction of observations on (Perry and Ayrton), 411.
Stress, on certain effects of, on soft iron wires, 510.
Studies on the electric arc (Dewar), 85.
— on the chinoline series (Dewar), 164.
Surfaces of mutual contact of aqueous solutions, effects of electric currents on the (Gore), 322.
Sweating from soles of the feet, *Bacterium fätidum* associated with (Thin), 473.
Thermal transpiration, note on (Reynolds), 300.
— effects of electric currents, on some (Preece), 408.
Thin (G.) on *Bacterium fätidum*: an organism associated with profuse sweating from the soles of the feet, 473.
Thorpe (T. E.), a magnetic survey of the fortyifth parallel in North America between the Atlantic Ocean and the Great Salt Lake, Utah, 132.
Thudichum (J. L. W.) on the modifications of the spectrum of potassium which are effected by the presence of phosphoric acid, and on the inorganic bases and salts which are found in combination with educts of the brain, 278.
Tilden (W. A.), elected, 468; admitted, 520.
Time-relations of the excitatory process in the ventricle of the heart of the frog, notice of further experimental researches on the (Sanderson), 373.
Tonicity of the heart and arteries, on the (Gaskell), 225.
Tribe (A.) and J. H. Gladstone, the aluminium iodine reaction, 545.
Tyndall (John) on Buff's experiments on the diathermancy of air, 10.

Urea, on the relation of the, to the total nitrogen of the urine in disease, 438.
Urine, human, researches into the colouring matters of, with an account of the separation of urobilin (MacMunn), 250.
— on the amount of nitrogen excreted in the, by man at rest (West and Russell), 444.
Urobilin, an account of the separation of (MacMunn), 250.

Vacuum discharges, on the sensitive state of (Spottiswoode and Moulton), 302.
Vincent (C. W.) and Lord Elphinstone on magnetic circuits in dynamo- and magneto-electric machines, 287.
Vines (S. H.) on the chemical composition of aleurone-grains, 387.

Water, on the lowering of the freezing-point of, by pressure (Dewar), 533.
— spectrum of (Living and Dewar), 580.
West (S.) and W. J. Russell on the relation of the urea to the total nitrogen of the urine in disease, 438.
— on the amount of nitrogen excreted in the urine by man at rest, 444.
Whipple (G. M.), results of an inquiry into the periodicity of rainfall, 70.
Worthington (A. M.) on the spontaneous segmentation of a liquid annulus, 49.
LONDON:
HARRISON AND SONS, PRINTERS IN ORDINARY TO HER MAJESTY,
ST. MARTIN'S LANE.
