INDEX to VOL. LIII.

AIR, announcement of the freezing of liquefied atmospheric air into a solid, 80.

Air temperature and pressure at British observatories, harmonic analysis of hourly observations of. Part I. (Strachey), 66.

Anchor ring, the potential of an (Dyson), 372.

Arrow-poison of the Wa Nyika and other tribes of East Equatorial Africa, preliminary notice on the (Fraserr and Tillic), 163.

Bacillus anthracis, further experiments on the action of light on (Ward), 23.

—— —— and its spores in potable waters, the vitality and virulence of (Frankland and Ward), 164.

Bacterium Zopffi, upon the action of gravity on (Boyce and Evans), 48.

Beevor (C. E.) and V. Horsley, a further minute analysis by electric stimulation of the so-called motor region (facial area) of the cortex cerebri in the monkey (Macacus sinesis), 463.

Blood of birds, on the presence of urea in the, and its bearing upon the formation of uric acid in the animal body (Garrod), 478.

Boyce (R.) and A. E. Evans, upon the action of gravity on Bacterium Zopffi, 48.

—— and N. F. Surveyor, upon the existence of more than one fungus in Madura disease (mycetoma), 110.

Cancer, on the alleged increase of (King and Newsholme), 405.

Candidates for election, list of, 65.

—— —— list of recommended, 394.

Cardiac rhythm, on the influence exercised by the central nervous system on the, with an enquiry into the action of chloroform on that rhythm (Mac-William), 464.

Coloration of the skins of fishes, especially of Pleuronectidae, on the (Cunningham and MacMunn), 384.

Colour and sound, analogy of (Mackold), 375. (Title only.)

Cooke (J. H.) the Har Dalam Cavern, Malta, and its fossiliferous contents. With a report on the organic remains by A. S. Woodward, 52. (Title only.)

Copper and iron, the absolute thermal conductivities of (Stewart), 151.

Cortex cerebri in the monkey, a further minute analysis by electric stimulation of the so-called motor region (facial area) of the (Beevor and Horsley), 463.

Covarianls of plane curves, and the operators employed in their development, on the differential (Gwyther), 420.

Croonian lecture (Virchow), 114.

Cunningham (J. T.) and C. A. MacMunn, on the coloration of the skins of fishes, especially of Pleuronectidae, 384.

Dewar, Professor, announces freezing liquefied atmospheric air into a solid, 80.

Differential covariants of plane curves, and the operators employed in their development, on the (Gwyther), 420.

Dischidia Rafflesiana, on (Groom), 51.

Dyson (F. W.) the potential of an anchor ring, 372.

Electric organ of the skate; note on an electric centre in the spinal cord (Ewart), 388.

—— stimulation of the so-called motor region (facial area) of the cortex cerebri in the monkey (Beevor and Horsley), 463.

Electrical and mechanical units, the value of the mechanical equivalent of heat, deduced from some experiments performed with the view of establishing the relation between the (Griffiths), 6.

—— resistance of metals, the effects of mechanical stress on the (Gray and Henderson), 76.
Electrical resistance of thin liquid films, on the thickness and (Reinold and Rücker), 394.
Electrolysis of steam, the (Thomson), 90.
Equisetaceae and Psilotaceae, studies in the morphology of spore-producing members, preliminary statement on the (Bower), 19.
Evans (A. E.) and R. Boyce, upon the action of gravity on Bacterium Zopfi, 48.
Ewart (J. C.) the electric organ of the skate: note on an electric centre in the spinal cord, 388.

Films, on the thickness and electrical resistance of thin liquid (Reinold and Rücker), 394.

Fishes, on the coloration of the skins of, especially of Pleuronectidae (Cunningham and MacMunn), 384.

Frankland (F. F.) and H. M. Ward, second report to the Water Research Committee of the Royal Society. The vitality and virulence of Bacillus anthracis and its spores in potable waters, 164.

Fraser (T. R.) and J. Tillie, preliminary notice on the arrow-poison of the Wa Nyika and other tribes of East Equatorial Africa, with special reference to the chemical properties and pharmacological action of the wood from which it is prepared, 153.

Gallium and indium, on the spectrum of thallium, and its relation to the homologous spectra of (Wilde), 369.
Garrod (Sir A.) on the presence of urea in the blood of birds, and its bearing upon the formation of uric acid in the animal body, 478.

Gases, on the densities of the principal (Rayleigh), 134.

Glacial or so-called post-glacial period, on the evidences of a submergence of Western Europe and of the Mediterranean coasts at the close of the (Prestwich), 50.

Government Grant of £4,000, account of the appropriation of, 318.

Gray (J. H.) and J. B. Henderson, the effects of mechanical stress on the electrical resistance of metals, 76.

Greek temples, on the results of an examination of the orientation of a number of (Penrose), 379.

Griffiths (E. H.) the value of the mechanical equivalent of heat, deduced from some experiments performed with the view of establishing the relation between the electrical and mechanical units, together with an investigation into the capacity for heat of water at different temperatures, 6.

Groom (P.) on Dischidia Raflesiana, 51.

Gwyther (R. F.) on the differential co-variants of plane curves, and the operators employed in their development, 420.

Har Dalam Cavern, Malta, and its fossiliferous contents, the (Cooke), 52.

With a report on the organic remains, by A. S. Woodward. (Title only.)

Harmonic analysis of hourly observations of air temperature and pressure at British observatories. Part I (Strachey), 66.

Haycraft (J. B.) a new hypothesis concerning vision, 78. (Title only.)

Heat, the value of the mechanical equivalent of, deduced from some experiments performed with the view of establishing the relation between the electrical and mechanical units (Griffiths), 6.

— of water at different temperatures, investigation into the capacity for (Griffiths), 6.

Henderson (J. B.) and J. H. Gray, the effects of mechanical stress on the electrical resistance of metals, 76.

Higgs (G.) on the geometrical construction of the oxygen absorption lines Great A, Great B, and a, of the solar spectrum, 110. (Title only.)

Hopkinson (J.), E. Wilson, and F. Lydall, magnetic viscosity, 352.

Horsley (V.) and C. E. Bevor, a further minute analysis by electric stimulation of the so-called motor region (facial area) of the cortex cerebri in the monkey (Macacus sinicus), 463.

Hypolimnas, on the mimetic forms of certain butterflies of the genus (Swinhoe), 47.

Indium and gallium, on the spectrum of thallium, and its relation to the homologous spectra of (Wilde), 369.

Iron and copper, the absolute thermal conductivities of (Stewart), 151.

Kew Committee, report of the, 322.

King (G.) and A. Newsholme, on the alleged increase of cancer, 405.

Knee-jerk, on some circumstances under which the normal state of the, is altered (Russell), 430.
INDEX.

Light, action of, on Bacillus anthracis (Ward), 23.
Lumbo-sacral plexus of Macacus rhesus, an experimental investigation of the nerve roots which enter into the formation of the (Russell), 459.
Lydall (F.), J. Hopkinson, and E. Wilson, magnetic viscosity, 352.

Macacus rhesus, an experimental investigation of the nerve roots which enter into the formation of the lumbo-sacral plexus of (Russell), 459.

sinicus, a further minute analysis by electric stimulation of the so-called motor region (facial area) of the cortex cerebr in (Beevor and Horsley), 463.

Macdonald (J. D.) analogy of sound and colour. Comparison of the seven colours of the rainbow with the seven notes of the musical scale, as determined by the monochord, and of the wave-lengths of colour and sound, 375. (Title only.)

MacMunn (C. A.) and J. T. Cunningham, on the coloration of the skins of fishes, especially of Pleuronectidae, 384.

MacWilliam (J. A.) on the influence exercised by the central nervous system on the cardiac rhythm, with an enquiry into the action of chloroform on that rhythm, 464.

Madura disease (mycetoma) upon the existence of more than one fungus in (Boyce and Surveyor), 110.

Magnetic viscosity (Hopkinson, Wilson, and Lydall), 352.

Mechanical equivalent of heat, value of the, deduced from some experiments performed with the view of establishing the relation between the electrical and mechanical units (Griffiths), 6.

Metals, the effects of mechanical stress on the electrical resistance of (Gray and Henderson), 76.

Meteoric stone found at Makariwa, near Invercargill, New Zealand, on a (Ulrich), 54.

Mimetic forms of certain butterflies of the genus Hypolimnas, on the (Swinhoe), 47.

Monochord, comparison of the seven colours of the rainbow, with the seven notes of the musical scale, as determined by the (Macdonald), 375. (Title only.)

Motor region (facial area) of the cortex cerebr in the monkey, a further minute analysis by electric stimulation of the so-called (Beevor and Horsley), 463.

Muscles, further experimental note on the correlation of action of antagonistic (Sherington), 407.

Mycetoma (Madura disease), upon the existence of more than one fungus in (Boyce and Surveyor), 110.

Nerve roots which enter into the formation of the lumbo-sacral plexus of Macacus rhesus, an experimental investigation of the (Russell), 459.

Newsholme (A.) and G. King, on the alleged increase of cancer, 405.

Obituary notice of Fellow deceased:—Thomson, James, i.

Ophthalmometer, on a portable (Reid), 1.

Orientation of a number of Greek temples, on the results of an examination of the (Penrose), 379.

Oximides, organic, a research on their pharmacology (Pomfret), 398.

Oxygen absorption lines, Great A, Great B, and a of the solar spectrum, on the geometrical construction of the (Higgs), 110. (Title only.)

Pathology among biological studies, the position of.—Cromoon lecture (Vichow), 114.

Penrose (F. C.) on the results of an examination of the orientation of a number of Greek temples, with a view to connect these angles with the amplitudes of certain stars at the time these temples were founded, and an endeavour to derive therefrom the dates of their foundation by consideration of the changes produced upon the right ascension and declination of the stars arising from the precession of the equinoxes, 379.

Pleuronectidae, on the coloration of the skins of fishes, especially of (Cunningham and MacMunn), 384.

Pomfret (H. W.) organic oximides: a research on their pharmacology, 398.

Potential of an anchoring ring, the (Dyson), 372.

Prestwich (J.) on the evidences of a submergence of Western Europe and of the Mediterranean coasts at the close of the glacial or so-called post-glacial period, and immediately preceding the neolithic or recent period, 80.
Psilotaceae and Equisetaceae, studies in the morphology of spore-producing members, preliminary statement on the (Bower), 19.

Ramsay (W.) and J. Shields, on the variation of surface energy with temperature, 150.
Rayleigh (Lord) on the densities of the principal gases, 134.
Reid (T.) on a portable ophthalmometer, 1.
Reinold (A. W.) and A. W. Rücker, on the thickness and electrical resistance of thin liquid films, 394.
Rücker (A. W.) and A. W. Reinold, on the thickness and electrical resistance of thin liquid films, 394.
Russell (J. S. R.) an experimental investigation of the nerve roots which enter into the formation of the lumbo-sacral plexus of Macacus rhesus, 459.
— on some circumstances under which the normal state of the knee-jerk is altered, 430.

Scott (A.) on the composition of water by volume, 130.
Sherrington (C. S.) further experimental note on the correlation of action of antagonistic muscles, 407.
Shields (J.) and W. Ramsay, on the variation of surface energy with temperature, 150.
Skate, the electric organ of. Note on an electric centre in the spinal cord (Ewart), 388.
Solar spectrum, on the geometrical construction of the oxygen absorption lines Great A, Great B, and α of the (Higgs), 110. (Title only.)
Sound and colour, analogy of (Macdonald), 375. (Title only.)
Spectrum, on the geometrical construction of the oxygen absorption lines Great A, Great B, and α of the solar (Higgs), 110. (Title only.)
— of thallium, and its relation to the homologous spectra of indium and gallium, on the (Wilde), 369.
Spore-producing members, studies in the morphology of. Preliminary statement on the Equisetaceae and Psilotaceae (Bower), 19.
Steam, the electrolysis of (Thomson), 90.
Stewart (R. W.) the absolute thermal conductivities of copper and iron, 151.
Strachey (R.) harmonic analysis of hourly observations of air temperature and pressure at British observatories, Part I, 66.
Submergence of Western Europe and of the Mediterranean coasts at the close of the glacial or so-called post-glacial period, on the evidences of s (Prestwich), 80.
Surface energy, on the variation of, with temperature (Ramsay and Shields), 150.
Surveyor (N. F.) and R. Boyee, upon the existence of more than one fungus in Madura disease (mycetoma), 110.
Swinhoe (C.) on the mimetic forms of certain butterflies of the genus Hypolimnas, 47.

Thallium, on the spectrum of, and its relation to the homologous spectra of indium and gallium (Wilde), 369.
Thermal conductivities of copper and iron, the absolute (Stewart), 151.
Thomson (James), obituary notice of, i. — (J. J.) the electrolysis of steam, 90.
Tillie (J.) and T. R. Fraser, preliminary notice on the arrow-poison of the Wa Nyika and other tribes of East Equatorial Africa, with special reference to the chemical properties and pharmacological action of the wood from which it is prepared, 153.
Ulrich (G. H. F.) on a meteoric stone found at Makarita, near Invercargill, New Zealand, 54.
Urea in the blood of birds, and its bearing upon the formation of uric acid in the animal body, on the presence of (Garrod), 478.
Uric acid in the animal body, on the presence of urea in the blood of birds, and its bearing upon the formation of (Garrod), 478.

Variation of surface energy with temperature on the (Ramsay), 150.
Virchow (R.) admitted, 114.
— the position of pathology among biological studies.—Cromian lecture, 114.
Viscosity, magnetic (Hopkinson, Wilson, and Lydall), 352.
Vision, a new hypothesis concerning (Haycraft), 78. (Title only.)
Wa Nyika, arrow-poison of the (Fraser and Tillie), 153.
Ward (H. M.) further experiments on the action of light on Bacillus anthracis, 23.
— and P. F. Frankland, second
report to the Water Research Committee of the Royal Society. The vitality and virulence of Bacillus anthracis and its spores in potable waters, 164.

Water, its capacity for heat at different temperatures (Griffiths), 6.

— on the composition of, by volume (Scott), 130.

Water Research Committee of the Royal Society, second report to the. The vitality and virulence of Bacillus anthracis and its spores in potable waters (Frankland and Ward), 164.

Wilde (H.) on the spectrum of thallium, and its relation to the homologous spectra of indium and gallium, 369.

Wilson (E.), F. Lydall, and J. Hopkinson, magnetic viscosity, 352.

Woodward (A. S.) report on organic remains in the Har Dalam Cavern, Malta, 52. (Title only.) See J. H. Cooke.
