INDEX to VOL. LVII.

ABELIAN system of differential equations, on the, with a discussion of the periodicity of Abelian functions (Roberts), 301.
Address of the President, 37.
Agassiz (Alexander), admitted, 360.
Air, electrification of, and other gases, by bubbling through water and other liquids (Kelvin, Maclean, and Galt), 335.
— on the dielectrification of (Kelvin, Maclean, and Galt), 435.
Andrews (C.) micro-metallography of iron, Part I, 262. (Title only.)
Animals and plants, remarks on variation in (Weldon), 379.
— report of the Committee for conducting statistical inquiries into the measurable characteristics of, 360.
Anniversary meeting, 35.
Argon, a new constituent of the atmosphere (Rayleigh and Ramsay), 265.
— atomicity of, letter upon the (Fitzgerald), 296.
— if contained in vegetable or animal substances (MacDonald and Kellas), 490.
— note on the spectrum of (Newall), 346.
— on the spark spectrum of, as it appears in the spark spectrum of air (Hartley), 293.
— on the spectra of (Crookes), 287.
— the liquefaction and solidification of (Olszewski), 290.
Armstrong (Robert Young), obituary notice of, xxii.
Atoms, Maxwell’s theorem of the equal partition of energy amongst the degrees of freedom of, not inconsistent with the various internal movements exhibited by the spectra of gases (Fitzgerald), 312.
Auditors, election of, 1.
— report of, 35.
Bacterial life in Thames water, on the conditions affecting (Frankland), 439.
Baly (E. C. C.) a possible explanation of the two-fold spectra of oxygen and nitrogen, 468.

Barton (E. H.) electrical interference phenomena somewhat analogous to Newton’s rings, but exhibited by waves along wires, 68.
Beetham (Albert William), obituary notice of, xxv.
Beneden (Pierre Joseph van), obituary notice of, xx.
Black-damp, notes of an enquiry into the nature and physiological action of (Haldane), 249.
Blackman (F. F.) experimental researches on vegetable assimilation and respiration, No. 1. On a new method for investigating the carbonic acid exchanges of plants, 162.—No. 2. On the paths of gaseous exchange between aerial leaves and the atmosphere, 165.
Breathing, on the different forms of (Marcret), 95.
Brown (C. B.) and J. W. Judd, the rubies of Burma and associated minerals, their mode of occurrence, origin, and metamorphoses. A contribution to the history of corundum, 387.
Burbury (S. H.) on the application of the kinetic theory to dense gases, 302.
Burma, the rubies of, and associated minerals (Brown and Judd), 387.
Cabbages, note on the disease of, known as “finger and toe” (Mussee), 390.
Calamites, the roots of (Williamson and Scott), 1.
Candidates for election, list of, 386.
Capstick (J. W.) on the ratio of the specific heats of some compound gases, 322.
Carcinus maenas, an attempt to measure the death rate due to the selective destruction of, with respect to a particular dimension. A Report (Weldon), 360.
Cat, on the changes in movement and sensation produced by hemisection of the spinal cord in the cat (Marshall), 475.

VOL. LVII.
Cells, on the distribution of assimilated iron compounds, other than hemoglobin and hematin, in animal and vegetable. Preliminary communication (Macleanum), 261.

Chlorophyll, contributions to the chemistry of, No. VI. (Schunck and Marchlewski), 314.

Circulation, the influence of the force of gravity on the (Hill), 192.

Clowes (F.) the composition of the extingutive atmospheres produced by flames, 353.

Coal-measures, further observations on the organisation of the fossil plants of the. Part II. The roots of Calamites (Williamson and Scott), 1.

Corundum, the rubies of Burma and associated minerals, a contribution to the history of (Brown and Judd), 87.

Council, election of, 54.

Cranial nerve in man, on the development of the branches of the fifth (Dixon), 488.

Crookes (W.) on the spectra of argon, 287.

Croonian lecture (Engelmann), 411.

Crystals, an instrument for cutting, grinding, and polishing section-plates and prisms of mineral or other (Tutton), 324.

Davey (Lord) elected, 249.

— admitted, 312.

Davison (C.) on the Leicester earth-quake of August 4, 1893, 87.

De Candolle (Alphonse), obituary notice of, xiv.

Deering (W. H.) and W. Kellner, on the measurement of pressures by the crusher-gauge, 404.

Dielectric hysteresis, on the question of (Porter and Morris), 469.

Differential equations, on the Abelian system of, with a discussion of the periodicity of Abelian functions (Roberts), 301.

Dixon (A. F.) on the development of the branches of the fifth cranial nerve in man, 488.

— (H. H.) and J. Joly, on the ascent of sap, 3.

Donation fund, grants from the, 67.

Earthquake of August 4, 1893, on the Leicester (Davison), 87.

Echinoderm larvae, the effect of environment on the development of, an experimental inquiry into the causes of variation (Vernon), 382.

Election of Council and Officers, 54.

Electric arc, on the temperature of the carbons of the (Wilson and Gray) 32. (Title only.)

Electrical interference phenomena somewhat analogous to Newton's rings, but exhibited by waves along wires (Barton), 68.

Electrification of air and other gases by bubbling through water and other liquids (Kelvin, Maclean, and Galt), 335. See air, electrification of.

Ellipsoidal shell containing fluid, the oscillations of a rotating (Hough), 299.

Engelmann (T. W.) on the nature of muscular contraction—Croonian lecture, 411.

Ethylene, the action of heat upon. Part II (Lewes), 394.

Evans (Sir J.) the trusts of the Royal Society, 202.

Evolution, mathematical contributions to the theory of. II. Skew variation in homogeneous material (Pearson), 257.

Ewan (T.) on the absorption spectra of dilute solutions, 117.

Falmouth Observatory, report of magnetic observations at, for 1894 530.

Fellows admitted, 1.

— deceased, 36.

— elected, 36.

— number of, 67.

— withdrawn or removed, 36.

Financial statement, 56.

“Finger and toe,” note on the disease of cabbages and allied plants known as (Massee), 330.

Fitzgerald (G. F.), letter upon the atomicity of argon, 296.

— on some considerations showing that Maxwell's theorem of the equal partition of energy among the degrees of freedom of atoms is not inconsistent with the various internal movements exhibited by the spectra of gases, 312.

Flames, the composition of the extingutive atmospheres produced by (Clowes), 353.

— of hydrocarbon gases, the cause of luminosity in the (Lewes), 450.

Fossil plants of the coal-measures, further observations on the organisation of the. Part II. The roots of Calamites (Williamson and Scott), 1.

Frankland (E.) on the conditions affecting bacterial life in Thames water, 439.
INDEX.

Galt (A.), Lord Kelvin, and M. Maclean, electrification of air and other gases by bubbling through water and other liquids, 335.

— — — on the dielectrification of air, 436.

Gannon (W.) and A. Schuster, a determination of the specific heat of water in terms of the international electric units, 25.

Gases, on the application of the kinetic theory to dense (Burbury), 302.

— on the ratio of the specific heats of some compound (Capstick), 322.

Government Grant of £4,000, account of the appropriation of the, 494.

Grant (Robert), obituary notice of, i.

Gravity, the influence of the force of, on the circulation (Hill), 192.

Gray (P. L.) and W. E. Wilson, on the temperature of the carbons of the electric arc, with a note on the temperature of the sun, 32. (Title only.)

Griffiths (E. H.), the latent heat of evaporation of water, 212.

Hemoglobin and haematin, on the distribution of assimilated iron compounds other than, in animal and vegetable cells. Preliminary communication (Macallum), 261.

Haldane (J.) notes of an inquiry into the nature and physiological action of black-damp, as met with in Podmore Colliery, Staffordshire, and Lilleshall Colliery, Shropshire, 249.

Harmer (S. F.) preliminary note on embryonic fission in Lichenopora, 188.

Hartley (W. N.) on the spark spectrum of argon as it appears in the spark spectrum of air, 293.

Hawkins (B.), obituary notice of, xxiv. Hemisection of the spinal cord in the cat, on the changes in movement and sensation produced by (Marshall), 475.

Hill (L.) the influence of the force of gravity on the circulation, 192.

Hopkins (F. G.) the pigments of the Floridea. A contribution to the study of excretory substances which function in ornament, 5.

Hough (S. S.) the oscillations of a rotating ellipsoidal shell containing fluid, 299.

Hughes (D. E.) elected an auditor, 1.

Hydrocarbon gases, the cause of luminosity in the flames of (Lewes), 450.

Hysteresis, on the question of dielectric (Porter and Morris), 469.

Income and expenditure account, 66.

Instrument for cutting, grinding, and polishing section-plates and prisms of mineral or other crystals accurately in the desired directions, an (Tutton), 324.

Iron, micro-metallography of. Part I (Andrews), 262. (Title only).

— on slow changes in the magnetic permeability of (Mordey), 224.

— and steel, on the yield point of, and the effect of repeated straining and annealing (Unwin), 178.

— at welding temperatures (Wrightson), 351.

— compounds other than hemoglobin and hematin in animal and vegetable cells, on the distribution of assimilated. Preliminary communication (Macallum), 261.

Jack (W. R.) on the analysis of voluntary muscular movements by certain new instruments, 477.

Joly (J.) and H. H. Dixon, on the ascent of sap, 3.

Jones (J. V.) admitted, 1.

Judd (J. W.) and C. B. Brown, the rubies of Burma and associated minerals, their mode of occurrence, origin, and metamorphoses, 387.

Kellas (A. M.) and G. W. MacDonald, is argon contained in vegetable or animal substances? 400.

Keilner (W.) and W. H. Deering, on the measurement of pressures by the crusger-gauge, 404.

Kelvin (Lord), M. Maclean, and A. Galt, electrification of air and other gases by bubbling through water and other liquids, 335.

— — — — — on the dielectrification of air, 436.

Kennedy (A. B. W.) elected an auditor, 1.

Kew Committee, report of the, 500.

Kinetic theory, on the application of the, to dense gases (Burbury), 302.

Leaves, on the paths of gaseous exchange between aerial leaves and the atmosphere (Blackman), 165.

Leicester earthquake of August 4, 1893, on the (Davis), 87.

Lewes (V. B.), the action of heat upon ethylene. Part II, 394.

— the cause of luminosity in the flames of hydrocarbon gases, 450.

Lichenopora, preliminary note on embryonic fission in (Harmer), 188.
Limbs, experiments upon the influence of sensory nerves upon movement and nutrition of the (Mott and Sherrington), 481.

Lockyer (J. N.), observations of sun-spot spectra, 1879—1894, 199.
— on the photographic spectrum of γ-Cassiopeiae, 173.

Lydekker (R.) admitted, 1.

Macallum (A. B.) on the distribution of assimilated iron compounds, other than haemoglobin and hematin, in animal and vegetable cells. Preliminary communication, 261.

MacDonald (G. W.) and A. M. Kellas, is argon contained in vegetable or animal substances? 490.

Maclean (M.), Lord Kelvin, and A. Galt, electrification of air and other gases by bubbling through water and other liquids, 336.
— — — on the dielectrification of air, 436.

Magnetic permeability of iron, on slow changes in the (Morley), 224.

Magnetical observations at Falmouth Observatory for the year 1894, report of, 530.

Marcat (W.) on the different forms of breathing, 95.

Marchlewski (L.) and E. Schunck, contributions to the chemistry of chlorophyll. No. VI, 314.

Marshall (Arthur Milnes), obituary notice of, iii.
— (C. D.) on the changes in movement and sensation produced by hemisection of the spinal cord in the cat, 475.

Massye (G.) note on the disease of cabbages and allied plants known as "finger and toe," &c., 330.

Mathematical contributions to the theory of evolution. II. Skew variation in homogeneous material (Pearson), 257.

Medals, presentation of the, 48.

Morley (W. M.) on slow changes in the magnetic permeability of iron, 224.

Morris (D. K.) and A. W. Porter, on the question of dielectric hysteresis, 469.

Mott (F. W.) and C. S. Sherrington, experiments upon the influence of sensory nerves upon movement and nutrition of the limbs. Preliminary communication, 481.

Muscular contraction, on the nature of —Croonian lecture (Engelmann), 411.

Muscular movements, on the analysis of voluntary, by certain new instruments (Jack), 477.

Nerve, in man, on the development of the fifth cranial (Dixon), 488.

Nerves, sensory, experiments upon the influence of, upon movement and nutrition of the limbs (Mott and Sherrington), 481.

Newall (H. F.), note on the spectrum of argon, 346.

Nitrogen and oxygen, a possible explanation of the two-fold spectra of (Baly), 468.

Obituary notices of Fellows deceased:—
Armstrong, Robert Young, xxii.
Beetham, Albert William, xxv.
Beneden, Pierre Joseph van, xx.
De Candolle, Alphonse, xiv.
Grant, Robert, i.
Hawkins, Bisset, xxiv.
Marshall, Arthur Milnes, iii.
Romanes, George John, vii.
Wright, Charles R. Alder, v.
Officers, election of, 54.
Olszewski (K.), the liquefaction and solidification of argon, 290.

Oxygen and nitrogen, a possible explanation of the two-fold spectra of (Baly), 468.

Pearson (K.) mathematical contributions to the theory of evolution. II. Skew variation in homogeneous material, 257.

Pieridae, the pigments of the (Hopkins), 5.

Plants, on a new method for investigating the carbonic acid exchanges of (Blackman), 162.

Plants and animals, remarks on variation in (Weldon), 379.
— — report of the Committee for conducting statistical inquiries into the measurable characteristics of, 360.

Porter (A. W.) and D. K. Morris, on the question of dielectric hysteresis, 469.

President, address of the, 37.

Pressures, on the measurement of, by the crusher-gauge (Kellner and Deering), 404.

Rayleigh (Lord) and W. Ramsay, argon, a new constituent of the atmosphere, 265; addendum by W. Ramsay, 286.
Roberts (W. R. W.) on the Abelian system of differential equations, and their rational and integral algebraic integrals, with a discussion of the periodicity of Abelian functions, 301.

Romanes (George John), obituary notice of, vii.

Royal Society, the trusts of the (Evans), 202.

Rubies of Burma and associated minerals, the, their mode of occurrence, origin, and metamorphoses (Brown and Judd), 387.

Rücker (A. W.) elected an auditor, 1.

Sap, on the ascent of (Dixon and Joly), 3.

Schunck (E.) and L. Marekiewski, contributions to the chemistry of chlorophyll. No. VI, 314.

Schuster (A.) and W. Gannon, a determination of the specific heat of water in terms of the international electric units, 25.

Scott (D. H.) and W. C. Williamson, further observations on the organisation of the fossil plants of the coal-measures. Part II. The roots of Calamites, 1.

Sensory nerves, experiments upon the influence of, upon movement and nutrition of the limbs. Preliminary communication (Mott), 481.

Sherrington (C. S.) and F. W. Mott, experiments upon the influence of sensory nerves upon movement and nutrition of the limbs. Preliminary communication, 481.

Skew variation in homogeneous material (Pearson), 257.

Solutions, on the absorption spectra of dilute (Ewan), 117.

Specific heat of water in terms of the international electric units, a determination of the (Schuster and Gannon), 25.

Spectra, observations of sun-spot, 1879—1894 (Lockyer), 199.

—— of argon, on the (Crookes), 287.

—— of dilute solutions, on the absorption (Ewan), 117.

—— of gases, Maxwell's theorem of the equal partition of energy among the degrees of freedom of atoms not inconsistent with the various internal movements exhibited by the (Fitzgerald), 312.

—— of oxygen and nitrogen, a possible explanation of the two-fold (Baly), 468.

Spectrum, spark, of argon as it appears in the spark spectrum of air, on the (Hartley), 293.

Spectrum of argon, note on the (Newall), 346.

—— of γ-Cassiopea, on the photographic (Lockyer), 173.

Statistical inquiries into the measurable characteristics of plants and animals, report of the Committee for conducting, 360; Remarks on variation in animals and plants, to accompany the first report of the Committee (Weldon), 379.

Steel and iron, on the yield point of, and the effect of repeated straining and annealing (Unwin), 178.

—— —— at welding temperatures (Righton), 351.

Sun, note on the temperature of the (Wilson and Gray), 32 (Title only).

Sun-spot spectra, 1879—1894, observations of (Lockyer), 199.

Thames water, on the conditions affecting bacterial life in (Frankland), 439.

Trust funds, 60.

Trusts of the Royal Society, the (Evans), 202.

Tutton (A. E.) an instrument for cutting, grinding, and polishing section-plates and prisms of mineral or other crystals accurately in the desired directions, 324.

Unwin (W. C.) on the yield point of iron and steel and the effect of repeated straining and annealing, 178.

Variation, the effect of environment on the development of echinoderm larva, an experimental inquiry into the causes of (Vernon), 382.

—— in animals and plants, remarks on (Weldon), 379.

Vegetable assimilation and respiration, experimental researches on. No. 1. On a new method for investigating the carbonic acid exchanges of plants, 162,—No. 2. On the paths of gaseous exchange between aerial leaves and the atmosphere (Blackman), 165.

Vernon (H. M.) the effect of environment on the development of echinoderm larva: an experimental inquiry into the causes of variation, 382.

Vice-Presidents, appointment of, 162.

Water, a determination of the specific heat of, in terms of the international electric units (Schuster and Gannon), 25.

—— the latent heat of evaporation of (Griffiths), 212.
INDEX.

Weldon (W. F. R.) remarks on variation in animals and plants. To accompany the first report of the Committee for conducting statistical inquiries into the measurable characteristics of plants and animals, 379.

—— report of the Committee “for conducting statistical inquiries into the measurable characteristics of plants and animals.” Part I. An attempt to measure the death-rate due to the selective destruction of Carcinus maenas with respect to a particular dimension, 360.

Williamson (W. C.) and D. H. Scott, further observations on the organisation of the fossil plants of the coal-measures. Part II. The roots of Calamites, 1.

Wilson (W. E.) and P. L. Gray, on the temperature of the carbons of the electric arc, with a note on the temperature of the sun, 32. (Title only.)

Wright (Charles R. Alder), obituary notice of, v.

Wrightson (T.) iron and steel at welding temperatures, 351.

ERRATA.

VOL. 56, 1894.

Page 92, 8th line from top, § 10, for “ no ” substitute “ comparatively little.”

" 33, last line but one of § 13, for “ 6.10^-5 ” substitute “ 6.10^-11,” and for “ 4.8 per cent.” substitute “ 4.8*10^-8.”

" 33, delete the first paragraph of § 14.

" 33, line 5 from the end of § 14, for “ Even ” substitute “ But,” and in line 3 from the end of § 14 for “ sufficient ” substitute “ insufficient.”

VOL. 57, 1895.

P. 267, line 12, for deduction read correction (additive).

" 16, for 1:2505 read 1:2511.

" 20, for 2:2984 read 2:2996.

" 31, for 0:87471 read 0:87517.

" 31, for 13:9954 read 14:003.

END OF FIFTY-SEVENTH VOLUME.

HARRISON AND SONS, Printers in Ordinary to Her Majesty, St. Martin’s Lane.
