INDEX TO VOL. VIII.

Air, velocities of currents of, in vertical tubes, 177; quantity of, inspired during the day and night, and under the influence of exercise, food, &c., 451; temperature of a body moving slowly through, 556.
Airy (G. B.), pendulum experiments in Harton Colliery for determining the mean density of the earth, 13; supplement, 58.
——, account of the construction of the new national standard of length, and of its principal copies, 530.
Alcohols, new class of, 33, 511.
Alison (Dr. S. S.) on a new sphygmoscope, an instrument for indicating the movements of the heart and blood-vessels, 18.
Alkaloids, optical characters of certain, associated with quinine, 340.
Ammonia and its analogues, new series of compounds derived from, 502.
Andrews (Dr. T.) on the density of ozone, 498.
Annelids, reproductive organs of the, 371.
Anniversary Meeting, Dec. 1, 1856, 239.
Annual Meeting for election of Fellows, 143.
Antimony-bases, contributions towards the history of the, 500.
Aqueous vapour, action of, in disturbing the atmosphere, 421.
Arsenic-bases, contributions towards the history of the, 500.
Arthur's Seat, deflection of plumb-line at, 45.
Aurora, 214.
Bakerian Lecture.—On the electro-dynamic properties of metals, 50.—On the relations of gold and other metals to light, 353.
Barlow (W. H.) on an element of strength in beams subjected to transverse strain, named the resistance of flexure, 432.
Barometer, on the construction of a standard, 214.
Bate (S.) on the development of Carcinus Manxus, 544.
Beams, element of strength in, 432.
Beechey (Rear-Admiral F. W.), obituary notice of, 283.
Blood, microscopical examination of the circulation of the, in the vessels of the iris, &c., 229.
Boole (G.) on the comparison of transcendents, with certain applications to the theory of definite integrals, 461.
Booth (Rev. J.) on the application of parabolic trigonometry to the investigation of the properties of the common catenary, 443.
Bowerbank (J. S.) on the anatomy and physiology of the Spongidae, 573.
Brachiopoda, organization of the, 463.
Brain, researches on the intimate structure of the, 577.
Brooke (H. J.) on the geometrical isomorphism of crystals, 187.
Brown-Séquard (Dr. E.) on the action of certain parts of the solar spectrum upon the iris, 233.
——, experimental researches on the spinal cord as a leader for sensibility and voluntary movements, 591.
—— on the resemblance between the effects of the section of the sympathetic nerve in the neck, and of a transverse section of a lateral half of the spinal cord, 594.
——, experimental researches on the influence of efforts of inspiration on the movements of the heart, 596.
—— on the influence of oxygen on the vital properties of the spinal cord, nerves and muscles, 598.
—— on the power possessed by motor and sensitive nerves of retaining their vital properties longer than muscles, when deprived of blood, 600.
Buckland (Rev. W.), obituary notice of, 260.
Buckton (G. B.) on the action of sulphuric acid upon theamides and nitriles, with remarks on the conjugate sulpho-acids, 158.
Buff (H. L.) on some compounds of ethylene, 188.
INDEX.

Buist (G.) on the causes and phenomena of the repulsion of water from the feathers of water-fowl and the leaves of plants, 520.

Bunsen (Prof.), photo-chemical researches, Part I., 234; Part II., 326; Part III., 516.

Burlington House, first Meeting held in, 455.

Cahours (A.) on a new class of alcohols, 33.
— remarks on a new class of alcohols, 511.
— researches on the phosphorus-bases, 523.

Camera obscura, phenomenon of relief of the image formed in the ground glass of the, 569.

Canada, serpentine of, 423.

Carcinus Menas, development of, 544.

Carpenter (W.), researches on the Foraminifera, Part II., 205.

Caustics, memoir on, 110.

Cayley (A.), third memoir on quantics, 76.
— memoir upon caustics, 110.
— memoir on curves of the third order, 310.
— memoir on the resultant of a system of two equations, 322.
— on the symmetric functions of the roots of certain systems of two equations, 322.
— memoir on the symmetric functions of the roots of an equation, 323.
— memoir on the conditions for the existence of given systems of equalities among the roots of an equation, 324.
— tables of the Sturmian functions for equations of the second, third, fourth and fifth degrees, 325.
— on a class of dynamical problems, 506.
— supplementary researches on the partition of numbers, 573.

Challis (Rev. J.) on the problem of three bodies, 117.

Chambers (Dr. W. F.), obituary notice of, 268.

Chemical rays, optical and chemical extinction of the, 516.

Chili, analyses of silver ores from, containing iodine, bromine and chlorine, 496.

Chowne (Dr. W. D.) on the velocities of currents of air in vertical tubes, due to the presence of aqueous vapour in the atmosphere, 177.

Chronometer compass, description of a, 416.

Church (A. H.) on some new colouring matters, 48.

Clarke (J. L.) on the nervous system of Lumbricus terrestris, 343.
— researches on the intimate structure of the brain; human and comparative. Part I. The medulla oblongata, 577.

Claudet (A.) on various phenomena of refraction through semi-lenses or prisms, producing anomalies in the illusion of stereoscopic images, 104.
— on the phenomenon of relief of the image formed on the ground glass of the camera obscura, 569.

Coal, boghead, products of distillation of, at low temperatures, 119, 338.

Colour blindness, 172.

Colouring matters, new, 48.

Cook (Rev. W.) on the theory of the gyroscope, 437.

Cooper (E. J.) on the perihelia and nodes of the planets, 543.

“Copernicus,” notes on the drawing of, 73.

Copley Medal awarded to H. Milne-Edwards, 252.

Crichton (Sir A.), obituary notice of, 269.

Crookes (W.) on the photography of the moon, 363.

Croonian Lecture.—On the cause of the rhythmic motion of the heart, 473.

Crystals, geometrical isomorphism of, 187; magnetic induction of, 448.

Ctenostomatous polyzoon from the Australian coast, 383.

Currey (F.) on the fructification of certain sphaeraceous Fungi, 588.

Curves of the third order, 310.

Cysticercus cellulose, structure and development of the, 422.

Daphnia, account of the two methods of reproduction in, 352.

Davy (Dr. J.) on the vitality of the ova of the Salmonide of different ages, 27.

Definite integrals, on the determination of unknown functions which are involved under, 146, 376; comparison of transcendents, with certain applications to the theory of, 461.

De la Rue (Warren), chemical examination of Burmese naphtha, or Rangoon tar, 221.

Dental tubes, presence of fibrils of soft tissue in, 63.

Determinants, better called eliminants, 426.

Diamond (Dr. H. W.) on the application of photography to the physiognomic and mental phenomena of insanity, 117.

Donkin (W. F.) on the equation of Laplace’s functions, &c., 307.

Duppa (P. B.) on the bromide of titanium 42.

Dynamical problems, class of, 506.
Earth, mean specific gravity of the, 45; secular changes of the magnetic system of the, 49; figure, dimensions and mean specific gravity of the, 111; stability of loose, 185.

Earth's mean density, causes of the great variation among the different measures of the, 295.

Earthwork, mathematical theory of the stability of, 60.

Elasticity, elements of a mathematical theory of, 85.

Electric conductivity of nickel and iron, 546; copper, 550.

Electric currents, peristaltic induction of, 121.

Electric telegraph, on rapid signalling by the, 299, 303.

Electricity, statical, on quantitative measurement in, 166.

Electro-physiological researches, 209.

Elephant, placenta of the, 471.

Ellis (G. V.), researches into the nature of the involuntary muscular fibre, 212.

Equations, symmetric functions of the roots of certain systems of two, 322, 323; resultant of a system of two, 322; conditions for the existence of given systems of equalities among the roots of, 324.

Ethylene, on some compounds of, 188.

Excrements, human, immediate principles of, 413.

Fallopian tube conception, existence of the decidua around the ovum within the Fallopian tube, in four cases of, 534.

Faraday (M.) on the relations of gold and other metals to light, 356.

Field (P.) on the existence of silver in sea-water, 292.

—— on the separation of iodine, &c., and the comparative affinity of these elements for silver, &c., 496.

Flexure, resistance of, 432.

Fluids, alterations of temperature accompanying changes in pressure in, 564.

Fluids in motion, thermal effects of, 41, 178, 556.

Foraminifera, researches on, 205.

Frankland (E.), researches on organo-metallic bodies:—third memoir, 198.

—— on a new series of compounds derived from ammonia and its analogues, 502.

Fungi, fructification of certain sphaeriaceous, 588.

Gall-bladder, on the functions of the mucous membrane of the, 133.

Gasteropoda, natural affinities and classification of, 384.

Glaciers, observations on, 331; plasticity of ice, as manifested in, 455.

Gold and other metals, relations of, to light, 356.

Gomes de Souza (J.) on the determination of unknown functions which are involved under definite integrals, 146; addition to the memoir, 376.

Gosse (P. H.) on the dioecious character of the Rotifera, 66.

Gravatt (W.), elementary considerations on the subject of rotatory motion, 76.

Guthrie (G. J.), obituary notice of, 272.

Gyroscope, theory of the, 437.

Haidinger (K.), elected foreign member, 229.

Hancock (A.) on the organization of the Brachiopoda, 463.

Hansteen (C.) on the secular changes of the magnetic system of the earth, &c., 49.

Harley (Dr. G.) on the condition of the oxygen absorbed into the blood during respiration, 78.

Harris (Sir W. S.) on quantitative measurement in statical electricity, and on some new phenomena of electrical force, 166.

Heart, cause of the rhythmic motion of the, 473; experimental researches on the influence of efforts of inspiration on the movements of the, 596.

Heat, on the existence of multiple proportion in, 4, 211.

Herapath (Dr. W. B.) on the detection of strychnia by the formation of iodostrychnia, 149.

—— on the optical characters of certain alkaloids associated with quinine, and of the sulphates of their iodo-compounds, 340.

Hernia of the ovaries, history of two cases of, 377.

Hobarton, evidence of the existence of the decennial inequality in the solar-diurnal variations, &c. at, 314.

Hodgkinson (Eaton), experimental researches on the strength of pillars of cast iron, 318.

Hofmann (A. W.) on insolinic acid, 1.

—— on some of the metamorphoses of naphthalamine, 10.

—— on a new class of alcohols, 33, 511.

—— on a new mode of forming triethylamine, 489.

—— contribution towards the history of thiodine, 491.

—— on the action of sulphuric acid upon anisic and salicylic acids, 494.
Hofmann (A. W.), contributions towards the history of the phosphorus-, arsenic- and antimony-bases, 500, 523.

Hopkins (T.) on the action of aqueous vapour in disturbing the atmosphere, 421.

Hopkins (W.), experimental researches on the conductive powers of various substances, with the application of the results to the problem of terrestrial temperature, 535.

Hunt (T. S.) on the serpentines of Canada and their associated rocks, 423.
— on the part which the silicates of the alkalies may play in the metamorphism of rocks, 458.

Huxley (T. H.), observations on glaciers, 331.

Ice, plasticity of, 455.

Induction, phenomena of photo-chemical, 326.

Inflammation, early stages of, 581.

Insanity, on the application of photography to the physiognomic and mental phenomena of, 117.

Insolnic acid, 1.

Iron, strength of pillars of cast, 318.

Jacob (Captain W. S.) on the causes of the great variation among the different measures of the earth's mean density, 295.

Jago (J.), ocular spectres, structures and functions, mutual exponents, 603.

James (Lieut.-Col.), observations and computations made to ascertain the amount of the deflection of the plumbline at Arthur's Seat, and the mean specific gravity of the earth, &c., 45.
— on the figure, dimensions, and mean specific gravity of the earth, as derived from the Ordnance Trigonometrical Survey of Great Britain and Ireland, 111.

Joule (J. P.) on the thermal effects of fluids in motion, 41, 178, 556.
— letter in reference to Dr. Woods' paper read on Jan. 10th, 62.
— on the thermo-electricity of ferruginous metals, and on the thermal effects of stretching solid bodies, 355.
— on the thermal effects of longitudinal compression of solids, 564.

Kemp (Dr.) on the functions of the mucous membranes of the gall-bladder, with reference to the conversion of hepatic into cystic bile, 133.

Kew Observatory, verification of barometers at the, 214.

King (Rear-Admiral P. P.) on the specific gravity of sea-water in the northern and southern hemispheres, 291.

Kirkman (Rev. T. P.) on autopolar polyhedra, 217.
— on the k-partitions of a polygon and polyace, 311.

Kölliker (A.) on the action of urari and of strychnia on the animal economy, 201.

Laplace's functions, &c., equation of, 307.

Lee (Dr. R.) on the existence of the decidua around the ovum within the Fallopian tube, in four cases of Fallopian tube conception, &c., 534.

Light, on the magnetic and helicoidal rotatory effects of transparent bodies on polarized, 150; measurement of the chemical action of, 234; relations of gold and other metals to, 356.

Lister (Joseph) on the early stages of inflammation, 581.

Lubbock (J.), an account of the two methods of reproduction in Daphnia, and of the structure of the "Ephippium," 352.

Lumbricus terrestris, nervous system of, 343.

Macdonald (J. D.), further observations on the anatomy and physiology of Nautilus, 380.
— description of a ctenostomatous polyzoon, allied to Vesicularia, on the Australian coast, 383.
— on the natural affinities and classification of Gasteropoda, 584.
— on the sea saw-dust of the Pacific, 393.
— an anatomical description of a species of asteroid polypes, probably forming the type of a new genus of Alcyonide, 417.
— on the anatomy of Tridacna, 589.

Magnetic declination, on hourly observations of the, made at Point Barrow in 1852, 1853 and 1854, 610.

Magnetic disturbances, periodic laws discoverable in the mean effects of the larger, 40.

Magnetic induction of crystals, 448.

Magnetic Observatories, Colonial, on what they have accomplished, 396.

Magnetic variation at Toronto, lunar-diurnal, 216.

Magnetization, effects of, on the electric conductivity of nickel and of iron, 546.

Marcet (Dr. W.) on the immediate principles of human excrements in the healthy state, 413.
INDEX.

Martyn (Dr. P.) on the function of the thyroid body, 315.
Masoury, mathematical theory of the stability of, 60.
Mattencei (C.), electro-physiological researches.—Tenth Series, Part I., 209.
Medulla oblongata, 577.
Metals, thermo-electricity of ferruginous, 355; electro-dynamic qualities of, 546.
Metamorphism of rocks, part which the silicates of the alkalies may play in the, 458.
Miller (W. H.) on the construction of the imperial standard pound, and its copies of platinum; and on the comparison of it with the Kilogramme des Archives, Part I., 87; Part II., 144.
Milne-Edwards (H.), Copley Medal awarded to, 252.
Moon, photography of the, 363.
Muscular fibre, researches into the nature of the involuntary, 212.

Naphtha, Burmese, chemical examination of, 221.
Naphthalamine, metamorphoses of, 10.
Nautilus, further observations on the anatomy and physiology of, 380.
Nerves, on the vagus and spinal accessory, 69.
Nerves, motor and sensitive, retain their vital properties longer than muscles, 600.
Newman (F.) on determinants, better called eliminants, 426.
Numbers, partition of, supplementary researches on the, 573.

Observatory of the Collegio Romano, description of the, 83.
Ocular spectres, &c., 603.
Oldham (Dr. H.) on two cases of hernia of the ovaries, &c., 377.
Organic acids containing nitrogen, new series of, 198.
Organo-metallic bodies, researches on the, 198.
Ovaries, history of two cases of hernia of the, 377.
Owen (R.) on the Scelidotherium (Scelidotherium leptcephalum, Owen), a large extinct terrestrial sloth, 312.
— on the placenta of the elephant, 471.
Oxygen, on the condition of the absorbed into the blood during respiration, 78; influence of, on the vital properties of the spinal cord, nerves and muscles, 598.
Ozone, density of, 498.

Paget (J.) on the cause of the rhythmic motion of the heart, 473.

Pasteur (M.), Rumford Medal awarded to, 254.
Pendulum experiments in Har ton Colliery, 13, 58.
Perkin (W. H.) on some new colouring matters, 48.
Phillips (John), notes on the drawing of "Copernicus," 73.
Phillips (Reuben) on the aurora, 214.
Phosphorus-bases, contributions towards the history of the, 500; researches on the, 523.
Photo-chemical induction, phenomena of, 326.
Photo-chemical researches, Part I., 235; Part II., 326; Part III., 516.
Photography, on the application of, to the physiognomic and mental phenomena of insanity, 117.
Photography of the moon, 363.
Planets, perihelia and nodes of the, 543.
Plücker (Julius) on the magnetic induction of crystals, 448.
Pole (W.) on colour blindness, 172.
Polyedra, autopolar, 217.
Polygon and polyace, k-partitions of a, 311.
Polytypes, asteroid, anatomical description of a species of, 417.
Pound, on the construction of the imperial standard, and its comparison with the Kilogramme des Archives, 87, 144.
Problem of three bodies, 117.
Quantics, third memoir on, 76.
Quinine, on the optical character of certain alkaloids associated with, 340.

Rainey (G.) on the structure and development of the Cysticerus celluloides, as found in the pig, 66, 422.
Rangoon tar, chemical examination of, 221.
Rankine (W. J. M.) on the mathematical theory of the stability of earthwork and masonry, 60.
— on the stability of loose earth, 185.
Reeder (R.), description of a chronometer-compass, 416.
Refraction, on various phenomena of, through semi-lenses or prisms, 104.
Rendel (J. M.), obituary notice of, 279.
Resolution of Council respecting abstracts of papers received during the recess, 221.
Richardson (Sir J.), Royal Medal awarded to, 257.
Roscoe (H. E.), photo-chemical researches, Part I., 234; Part II., 326; Part III., 516.
Rotatory motion, elementary considerations on the subject of, 76.
Rotafera, dioecious character of the, 66.
Royal Medal awarded to Sir John Richardson, 257; W. Thomson, 258.
Rumford Medal awarded to M. Pasteur, 254.

Sabine (Major-Gen. E.) on periodical laws discoverable in the mean effects of the larger magnetic disturbances, No. III., 40.
—— on the lunar-diurnal magnetic variation at Toronto, 216.
—— on the evidence of the existence of the decennial inequality in the solar-diurnal variations, and its non-existence in the lunar-diurnal variation of the magnetic declination at Hobarton, 314.
—— on what the Colonial Magnetic Observatories have accomplished, 396.
—— on hourly observations of the magnetic declination, made at Point Barrow in 1852, 1853 and 1854, 610.
Salmonidae, vitality of the ova of the, 27.
Scelidotherium leptoeophalum, Owen, 312.
Sea saw-dust of the Pacific, 393.
Sea-water, specific gravity of, in the northern and southern hemispheres, 291; existence of silver in, 292.
Secchi (P. A.), explanatory remarks on a drawing of the lunar spot "Copernicus," presented to the Royal Society, 72.
——, description of the Observatory of the Collegio Romano at Rome, 83.
—— elected foreign member, 229.
Serpentines of Canada and their associated rocks, 423.
Sharpe (D.), obituary notice of, 275.
Silica, researches on, 440.
Silicates of the alkalies, part which they play in the metamorphism of rocks, 458.
Silver, existence of, in sea-water, 292; comparative degree of affinity of iodine, bromine and chlorine for, 496.
Sloth, large extinct terrestrial, 312.
Smith (Dr. E.) on the quantity of air inspired throughout the day and night, and under the influence of exercise, food, &c., 451.
Smyth (C. P.), report of proceedings of the astronomical expedition to Teneriffe in 1857, 528.
Solar spectrum, action of certain parts of the, upon the iris, 233.
Solids, thermal effects of longitudinal compression of, 564.
Special General Meeting, June 3rd, 1856, on the removal of the Society to Burlington House, 141.
Sphygmoscope, description of a new, 18.
Spinal cord, as a leader for sensibility and voluntary movements, 591.

Spongiadea, anatomy and physiology of the, 573.
Standard of length, new national, and of its principal copies, 530.
Stereoscopic images, anomalies in the illusion of, 104.
Stewart (B.) on an instrument for registering changes of temperature, 195.
Stokes (G. G.) on the effect of the rotation and ellipticity of the earth in modifying the numerical results of the Harton Colliery experiment, 59.
Strychnia, detection of, by the formation of iso-strychnia, 149; action of, on the animal economy, 204.
Sturm (J. C. F.), obituary notice of, 260.
Sturman functions for equations of the second, third, fourth and fifth degrees, 325.
Substances, conductive powers of various, 535.
Sulphuric acid, action of, on the nitriles and amides, 158; action of, upon anisic and salicylic acids, 494.

Telegraph wires, peristaltic induction in symmetrical systems of submarine, 126.
Temperature, on an instrument for registering changes of, 195.
Teneriffe, astronomical expedition to, in 1857, 528.
Thermal effects of fluids in motion, 41, 178; of stretching solid bodies, 355.
Thermo-electricity of ferruginous metals, 355.
Thialdine, contributions towards the history of, 491.
Thomson (J.) on the plasticity of ice, as manifested in glaciers, 455.
Thomson (W.) on the thermal effects of fluids in motion, 41, 128, 556.
——, elements of a mathematical theory of elasticity, 85.
—— on peristaltic induction of electric currents, 121.
——, dynamical illustrations of the magnetic and the helicoidal rotatory effects of transparent bodies on polarized light, 150.
——, Royal Medal awarded to, 258.
—— on practical methods for rapid signalling by the electric telegraph, 299, 303.
—— on the electro-dynamic qualities of metals — effects of magnetization on the electric conductivity of nickel and of iron, 546.
—— on the electric conductivity of commercial copper of various kinds, 550.
—— on the alterations of temperature accompanying changes of pressure in fluids, 564.
INDEX.

Thyroid body, function of the, 315.
Titanium, bromide of, 42.
Tomes (John) on the presence of fibrils of soft tissue in the dentinal tubes, 63.
Toronto, lunar-diurnal magnetic variation at, 216.
Train signalling, system of, 419.
Transcendents, comparison of, with certain applications to the theory of definite integrals, 461.
Tridacna, anatomy of, 589.
Triethylamine, on a new mode of forming, 489.
Trigonometry, parabolic, application of, to the investigation of the properties of the common catenary, 443.
Tyndall (J.), observations on glaciers, 331.
Urari, action of, on the animal economy, 201.
Vision, anatomical and physiological observations on the organ of, 8, 229.
Walker (C.V.), a system of train signalling, &c., 419.
Waller (Dr. A.), anatomical and physiological observations on the organ of vision, &c., Part I, 8.
Waller (Dr. A.), experiments on the vagus and spinal accessory nerves, 69.
——, experimental researches on the organ of vision, Part I, 229.
Water, causes and phenomena of the repulsion of, from the feathers of waterfowl and the leaves of plants, 520.
Welsh (John), account of the construction of a standard barometer, and of the apparatus and processes employed in the verification of barometers at the Kew Observatory, 214.
Williams (C. G.) on some of the products of the distillation of boghead coal at low temperatures, 119; Part L, 338.
Williams (Dr. T.), researches on the reproductive organs of the Annelids, 371.
Wolf (R.), extract of a letter from, 416.
Woods (Dr. T.) on the existence of multiple proportion in the quantities of heat, or equivalent alteration of internal space of bodies, caused by definite changes of state as produced by chemical combination or otherwise, 4, 211.
Yorke (Colonel P.), researches on silica, 440.

END OF THE EIGHTH VOLUME.

Printed by Taylor and Francis, Red Lion Court, Fleet Street.
